

ABSTRACT

Improved organophotoreceptor comprises an electrically conductive substrate and a photoconductive element on the electrically conductive substrate, the photoconductive element comprising:

5 (a) a charge transport material having the formula

where Y_1 and Y_2 comprise, each independently, a carbazolyl group;

10 X_1 and X_2 , each independently, are a bridging group;

E_1 and E_2 comprise, each independently, an epoxy group; and

Z is a linking group; and

15 (b) a charge generating compound.

Organophotoreceptors with the charge transport material crosslinked to a polymeric binder are also described. Corresponding electrophotographic apparatuses and imaging methods are described.
